

Investment Objective & Strategy

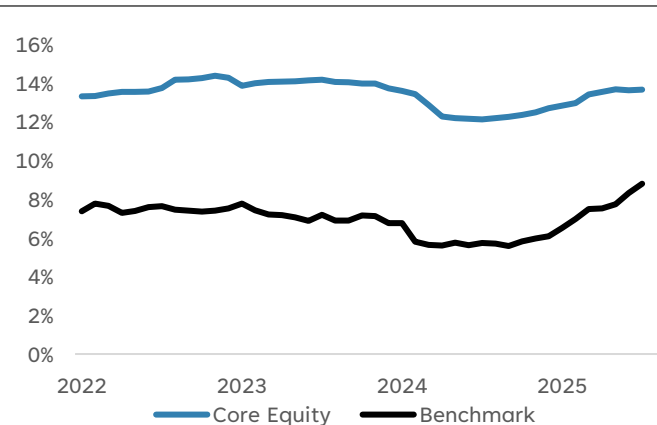

To provide capital growth in the long term by investing in listed companies that meets the core quality criteria of the portfolio manager. The portfolio has potential for high levels of price fluctuations over the short-term.

Southern Rock Capital seeks to invest in high-quality, attractively priced companies. Our systematic investment process aims to evaluate each business with a focus on profitability, financial strength, sustainability of earnings growth, and investment. The resulting portfolio seeks to manage the downside risk of equity investments by allocating capital withing a prudent valuation framework while providing attractive returns to long-term investors over a full market cycle.

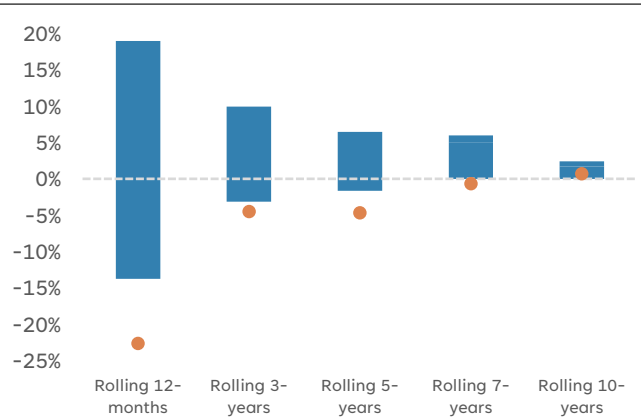

Investment Philosophy

We fundamentally believe that over the long-term, earnings growth is the major driver of the equity market's total returns, whereas the impact of valuation can be extreme over the short-term, but trivial over the long-term. By systematically finding quality companies that have a history of stable and higher margins than their peers, whilst maintaining stronger balance sheets, their earnings should grow at a higher rate than their competitors. By investing in these companies over a full market cycle, typically around 7-years, the portfolio is expected to deliver long-term inflation beating returns and returns in excess of the broad equity market.

Earnings growth, annualised over rolling 7-years (USD)

Impact of valuation over various time periods (10th to 90th percentile)

Earnings growth versus stability
